

Worldwide Register now for an introductory ecosan e-learning course.

Dec. 3 - Dec. 8, 2007: Ecosan Training Course - Capacity Building for Ecological Sanitation

Organisation: Ecosan Services Foundation in collaboration with Ecosan Capacity, a project funded by the Asia Pro Eco Programme of the European Union

Health, sanitation and water resource-management are key issues of sustainable development, particularly in developing countries. For those who cannot participate in ecosan face-to-face training courses in India, an internet-based introductory ecosan E-learning course has been developed. Designed and conducted by some of the most reputable ecosan experts worldwide, the course can be attended by all interested persons with a working internet connection **for free!** The e-course will be held from **December 3rd to December 8th, 2007.**

This course provides a focused overview on ecological sanitation (ecosan) as a framework for sustainable sanitation development and resource management. Based on practical experiences, ecosan toilet systems (dry toilets, source separation toilets, etc.) will be introduced, analyzed and discussed online. Specific focus will be given on applications in developing countries. The course will also discuss the role of ecosan-projects in water resource-management. Using these experiences, and supported by the course coach and international experts, the participants will work individually or in small groups on their own questions and case studies.

All the necessary documents are stored online and will be accessible to all participants. The online courses will facilitate access to a discussion forum where discussions are presented in a threaded and structured fashion.

Different experts from Europe and Asia will be the supervisors and will give discussion incentives in the course. The participants will discuss topics such as which technology is best suited for which situation, how to approach different stakeholders, reuse and health aspects as well as which factors need to be considered for the successful implementation of ecosan projects. Participants will also be able to initiate discussions themselves.

The course will be conducted on the e-learning platform **www.myNetworks.org**. To attend the course, first register as a community member on www.myNetworks.org. Afterwards, register online for the ecosan course in the "courses space". Don't miss this golden opportunity to gain an insight into Ecological Sanitation. It is very simple to register and it is for free!

Each training member who did successfully take part in the e-learning course will get a course certificate from the **International Ecological Engineering Society (IEES)**.
